

AI DIGITAL SOCIETY • THE 7-DAY PROGRAM

Your AI Business *in 7 Days*

Seven days, one step a day: your brain file, your AI employees, your AI avatar, your posts, and your daily routine. Every template included. Copy it. Make it yours.

BRAIN FILE

7 AI EMPLOYEES

AI AVATAR

DAILY POSTS

ALL TEMPLATES

Josée Bédard

Founder, AI Digital Society

EDITION 1 • 2026

Welcome. Here's the *truth* up front.

I'm Josée. I'm 58. I'm not a tech person. And I run my whole content business with a team of AI employees I built inside Claude.

Seven employees. Zero payroll. They find my ideas, write my posts, make my images, script my reels, check my brand, and schedule everything. My job is three words:

Decide. Approve. Press publish.

This guide is everything, A to Z. Not theory. The exact system I use every single day — including the actual files my employees read. You'll copy them, fill in your own answers, and have your own team running this week.

What this is not

This is not "money while you sleep." Nobody can promise you results, and I won't. What I can promise: by the end of this guide you'll have a working system that creates content for you every day — and your only job will be directing it.

Courses give you videos. This gives you employees.

How to use this guide

1 Read Day 1 in one sitting.

It's short. It changes how you see all of this.

2 Do one step per day.

Brain file Monday. First employee Tuesday. Don't rush. Each step is 30–60 minutes.

3 Copy the templates exactly.

Every gray box in this guide is a real file. Type it or paste it into Claude as written, then fill in your answers.

4 Keep the 10%.

AI does about 90% of the work. Your 10% — deciding and approving — is not optional. That's the whole system.

HONESTY NOTE

This guide teaches a content system. It does not guarantee income, followers, or sales. Anyone who promises you those things is selling hype. I'd rather tell you the truth on page two.

What's *inside*

- D1 **The Shift** — stop doing the work, start directing it
- D1 **What You Need** — the honest shopping list
- D2 **Step 1: The Brain File** — the one document that runs everything
- D3 **Step 2: Hire Your AI Employees** — all seven, with their job files
- D4 **Step 3: Your AI Avatar** — your face on video, built in Higgsfield
- D5 **Step 4: Making Posts** — hooks, captions, carousels, CTAs
- D6 **Step 5: The Posting System** — folders, rotation, scheduling
- D6 **The Quality Gate** — the employee that protects your name
- D7 **The Front Door** — one door, everything points to it
- D7 **Your Daily 30 Minutes** — the routine + your first 30 days
- A **Appendix** — the prompt bank + every template in one place

A WORD BEFORE WE START

Every screenshot-worthy trick in this guide came from months of trial and error. You're skipping the error part. Go slower than you want to — one solid step a day beats a rushed weekend you never finish.

DAY 1

The *Shift*

You're not collecting information anymore. You're hiring. This part explains the whole idea in five minutes, so every step after it makes sense.

Stop doing the work. *Direct it.*

Most people use AI like a vending machine. Type a question, get an answer, start over tomorrow. That's why their content sounds generic — and why they burn out.

I do it differently. I treat Claude like a small company that works for me. Each "employee" has a written job description. Each one reads the same brain file before it does anything — so everything sounds like *me*, follows *my* rules, and points to *my* front door.

The three ideas that make it work

IDEA 1

The brain file. One document that knows your voice, your audience, your rules, and your offer. Every employee reads it first. Every mistake you catch gets written back into it. Month twelve is better than you can imagine — because the brain never forgets.

IDEA 2

The 90/10. AI does about 90% of the work — the heavy end. Research, writing, design, scheduling. Your 10% is deciding what goes out and approving it. If you skip your 10%, the system publishes mistakes faster. Keep it.

IDEA 3

One front door. All content — every post, reel, and carousel — points to a single place (for me, a free community). Not five links. One door. Post every day, point everything at one door, and be worth trusting when they walk through it.

Why courses didn't work for me

I bought courses. Most people never finish them. Four reasons: the video mountain (40 hours you'll never watch), generic advice, no clear next move, and amnesia — everything you learn leaks away by Friday. An employee system fixes all four. The knowledge lives in files, not in your memory. The next move is always "run the employee."

The market votes every day. Your job is to listen, decide, and press publish.

What you *need*

The honest shopping list. You can start with the first two rows only and add the rest when you're ready.

TOOL	WHAT IT'S FOR	COST (APPROX.)
Claude — claude.ai/referral/F8tzMGyYig	Your whole team lives here. The paid plan is worth it — you'll use it every day.	~\$20/mo — free week with my link
A free community (mine: skool.com/ai-digital-society-5263/about)	Your front door. Where all content sends people. Start your own on Skool: skool.com/signup	Free to join; hosting your own group has a monthly fee
Higgsfield — higgsfield.ai?fpr=josee-9610b8	Your AI avatar — your face, talking on video, without filming yourself every day.	Credit packs, pay as you go
Voicebox — voicebox.sh	Your voice, cloned on your own computer. Reads any script in your voice, for every video.	Free (open source)
A scheduler — I use Blotato: blotato.com/?ref=josee (Meta Business Suite also works)	Posts go out on time without you being there. Meta's own scheduler is free.	Free-\$30/mo
Images	No design tool needed — my Image Maker employee makes every graphic inside Claude. Yours will too.	Included in Claude

First: what is Claude?

Never heard of Claude? Perfect — this section assumes exactly that.

Claude is an AI assistant made by a company called Anthropic. Think of it as a very smart helper you talk to by typing, the way you'd text a friend. You type "write me a Facebook post about walking my dog," and seconds later it writes one. It never gets tired, never judges a silly question, and it's available day and night. Claude is the "office" where every one of your AI employees will work.

READER BONUS — TRY IT FREE

Get a free week of Claude with my referral link:

claude.ai/referral/F8tzMGyYig

Sign up through that link and your first week is on the house — plenty of time to build your brain file and hire your first two employees before you pay a cent.

Install Claude, click by click (15 minutes, one time)

1 Open the sign-up page.

Open your internet browser (Chrome, Edge, or Safari — whatever you already use). Click the long address bar at the very top, type my free-week link from the box above exactly as written, and press Enter. You'll land on a page that looks like this:

Think fast, build faster

Brainstorm in chat, build in Cowork

 [Continue with Google](#)

OR

[Continue with email](#)

By continuing, you acknowledge Anthropic's [Privacy Policy](#) and agree to get occasional promotional emails and notifications.

 [Download desktop app](#)

Cha

THE CLAUDE WELCOME PAGE — THE SIGN-IN BOX IS ALL YOU NEED

2 Create your account.

In that box, click

"Continue with Google"

(easiest — it uses the Google account already on your computer) or

"Continue with email"

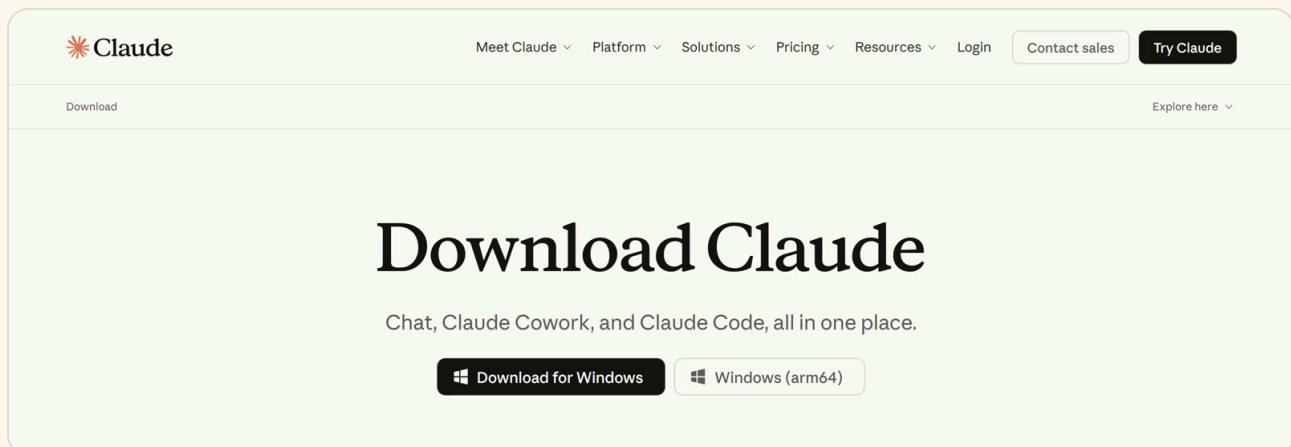

and follow the short steps. No credit card needed to start. That's it — you now have Claude, and you can already type to it in the browser.

1 Download the desktop app.

Back in the address bar, type `claude.com/download` and press Enter. Click the big dark button (it will say

"Download for Windows"

or "Download for Mac" — the site knows which computer you have):

CLAUDE.COM/DOWNLOAD — CLICK THE BIG DARK BUTTON, THEN OPEN THE DOWNLOADED FILE

4 Install it.

When the download finishes, click the file (it appears at the top-right of Chrome under the little download arrow, or in your Downloads folder). Click Yes/Install when your computer asks, then log in with the same account from step 2. One app gives you everything — Chat, Claude Cowork, and Claude Code, all in one place.

1 Put Claude on your phone.

Open the App Store (iPhone) or Google Play (Android), search **"Claude"**

, and install the one made by **Anthropic**

. Log in with the same account. This is for approving posts from the couch.

2 Get the paid plan.

In Claude, click your initials (bottom-left) → Settings → Upgrade, and pick the basic paid plan. You'll use Claude every day, and the free tier runs out fast. This is your payroll — for the whole team. (With my link above, your first week is free — decide after.)

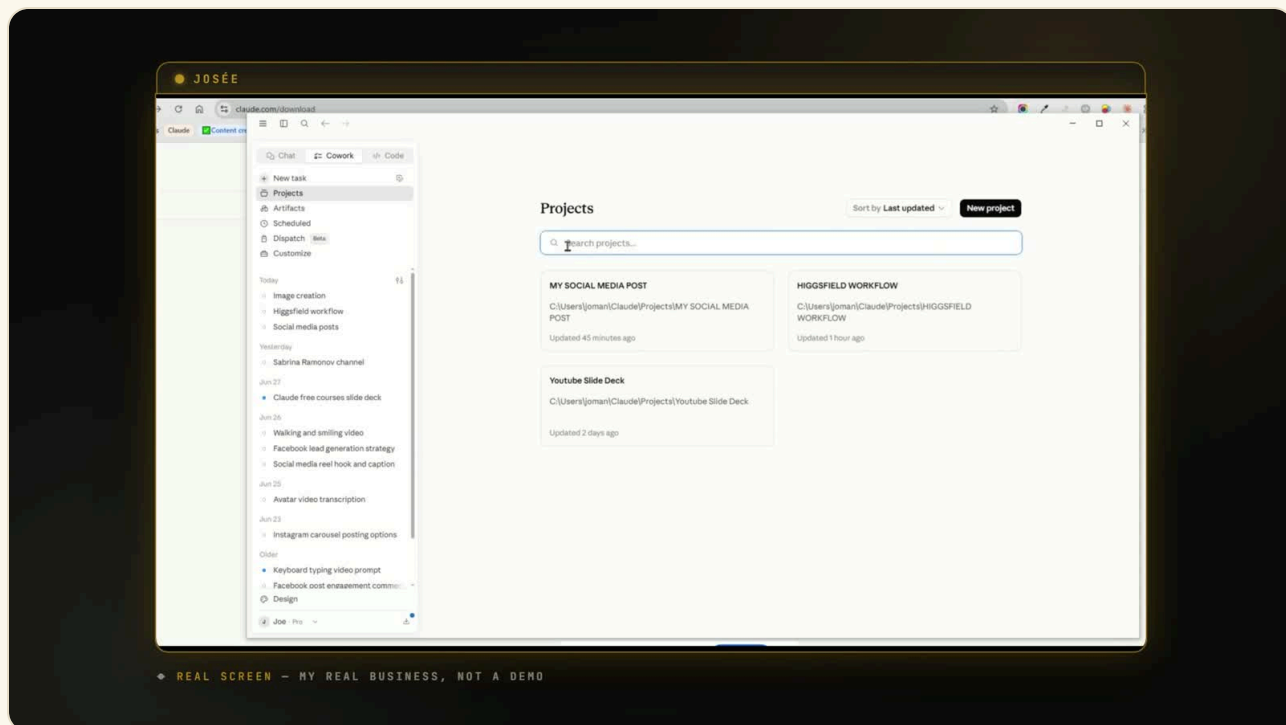

3 Learn one feature: Projects.

In the left sidebar, click **Projects** → **New Project**

. A Project is a room where Claude remembers files you put in it. You'll make one room per employee in Part 4. This one feature replaces all the copy-pasting.

4 Say hello.

Click in the message box at the bottom, type: *"I'm setting up an AI employee system for my content business. I'll bring you my brain file next."* — and press Enter. That's it. You've met your team's office.

A REAL FRAME FROM ONE OF MY YOUTUBE VIDEOS — THIS IS WHAT WORKING IN CLAUDE LOOKS LIKE

Set up the rest (as you reach each chapter)

ACCOUNT	WHEN	HOW
Skool (or any free-group platform)	Part 9	Join groups free. To start your own group, use my link: skool.com/signup (monthly fee applies).
Higgsfield	Part 5	higgsfield.ai?fpr=josee-9610b8 → sign up → buy a small credit pack to start. Don't buy big until your first clip works.
Voicebox (your voice)	Part 5	Free download: voicebox.sh → DOWNLOAD button → install → Create Voice.
Blotato (scheduler)	Part 7	My link: blotato.com/?ref=josee — or use free Meta Business Suite (business.facebook.com).

One folder. That's your office.

Make one folder on your computer. Inside it, make four more. This tiny bit of order is what keeps the whole machine from becoming a junk drawer:

MY-AI-BUSINESS/

— 00_Drafts/	← work in progress, not approved yet
— 01_Ready-to-Post/	← approved, waiting to go out
— 02_Posted/	← archive after publishing
— Reference/	← your photos, inspiration, swipe files
— brain-file.md	← the boss document (next chapter)

ABOUT ".MD" FILES

All my files end in ".md" — that's just a plain text file. Make one in Notepad (Windows) or TextEdit (Mac), or keep them as documents in Claude Projects. The ending doesn't matter. What matters is that the words live in a file, not in your head.

DAY 2 • STEP 1

The *Brain File*

One document that knows your voice, your audience, your rules, and your offer. Every employee reads it before doing anything. Build it today — it takes 45 minutes.

Build the brain *first*

If you skip this chapter, every post your AI writes will sound like everyone else's. The brain file is why mine sound like me.

How to use it

1 Copy the template below

into a file called `brain-file.md` (or a Claude Project's instructions).

2 Fill in every blank in your own words.

Messy is fine. Honest beats polished.

3 Start every Claude chat with it.

Paste it in, or keep it in a Claude Project so it's always loaded.

4 Update it weekly.

When you correct your AI ("never say X", "my audience hates Y"), write that rule into the brain file. This is the secret. The system gets smarter every week.

The easy way: let Claude interview you

Don't stare at blanks. Paste the template into Claude with this prompt, and Claude will build your brain file *with* you, one question at a time:

```
"Here is my brain file template: [paste the template below].  
Interview me to fill it in. Ask me ONE question at a time,  
in plain language. Dig for real stories – if my answer is  
vague, ask a follow-up. When we're done, write out my  
completed brain file so I can save it."
```

Answer honestly, in your own words. Twenty minutes of questions and you'll have a brain file that sounds like you — because it came out of your own mouth.

The template

```
# MY BRAIN FILE
## Every AI employee must read this before doing any work.

## WHO I AM
- Name: _____
- Age / life stage: _____
- My story in 3 sentences (why people should listen to me): _____
- What I am NOT (be honest – no fake expert claims): _____

## MY BUSINESS
- What I sell / will sell: _____
- My front door (the ONE place all content points to): _____
- My CTA keyword (the word people comment, e.g. "ACCESS"): _____

## MY AUDIENCE
- Who they are (age, situation, dreams): _____
- What they're afraid of: _____
- What they've already tried that didn't work: _____
- How they talk (words THEY use, not marketing words): _____

## MY VOICE
- Sentences: short. Grade-5 simple. Kitchen-table talk.
- Sound like: a friend who figured something out, not a guru.
- Words I use: _____
- Words I NEVER use: _____

## HARD RULES (never break these)
1. NO income claims. Ever. No dollar amounts, no "quit your job."
2. No hype words: "passive income", "money while you sleep",
   "secret", "guru", "hack".
3. Every post ends with ONE call to action pointing at my front door.
4. Never copy another creator's post word for word. Take the idea,
   rebuild it in my voice with my knowledge.
5. If unsure, write LESS claims and MORE honesty.

## LESSONS LEARNED (add to this every week)
- (example) 2026-03-04: My audience responds better to "simple"
  than "easy" – easy sounds like a scam to them.
```

WHY THIS WORKS

AI is a brilliant employee with total amnesia. The brain file is its memory. The "Lessons Learned" section at the bottom is the part most people never build — and it's the part that makes month twelve unrecognizable from month one.

DAY 3 • STEP 2

Hire your *AI employees*

Seven job descriptions. Each one is a small file you give to Claude. Together they run your content business. Hire them one at a time.

Meet the *team*

An "employee" is just a job description Claude reads before working. Same idea as the brain file — but the brain file says who YOU are, and the job file says what THIS employee does.

How to "hire" one

1 Copy the job file

(templates on the next pages) into its own document, e.g. `employee-post-writer.md`.

2 Open Claude and paste two things:

your brain file, then the job file. Then give the day's task ("write me 3 posts about _____").

3 Even better: use Claude Projects.

Make one Project per employee. Put the brain file + job file in the Project's knowledge. Now hiring is just opening the right Project.

4 Power-user path: Claude Code / Cowork skills.

If you use Claude on your computer (Claude Code or the desktop Cowork mode), each employee becomes a "skill" — a folder with a `SKILL.md` file — and you can call it by name, like a real staff member. Same files, more automatic.

The seven employees

EMPLOYEE 1

The Viral Spotter — studies creators in your niche and finds their outliers: posts that exploded past their normal numbers. Outliers are the market raising its hand. This employee fills your idea list so you never stare at a blank page.

EMPLOYEE 2

The Post Writer — takes one idea and writes the post: hook, body, call to action. In your voice, from your brain file, never copied.

EMPLOYEE 3

The Image Maker — turns a post into a graphic or carousel design in your brand colors, same look every time.

EMPLOYEE 4

The Reel Scripter — rewrites a proven video idea as a 20–40 second talking script in your voice, with a hook in the first two seconds.

EMPLOYEE 5

The Brand Reviewer — your quality gate. Checks every piece before it ships: voice, rules, claims, CTA. Automation without a quality gate is just a faster way to publish mistakes.

EMPLOYEE 6

The Scheduler — plans the calendar: what goes out, when, on which platform, and logs it so you never repeat yourself.

EMPLOYEE 7

The Video Editor — the advanced hire. Helps you turn scripts + your avatar clips into finished videos. Hire this one last, once the first six are humming.

HIRING ORDER

Week 1: Post Writer + Brand Reviewer. Week 2: Viral Spotter + Image Maker. Week 3: Reel Scripter + Scheduler. Later: Video Editor. Two employees working beats seven half-set-up.

The job files, *ready to copy*

Copy each gray box into its own file. Fill any blanks. These are shortened versions of my real files — everything you need is here.

EMPLOYEE: THE POST WRITER

Read my brain file first. Then follow this job description.

YOUR JOB

Write social posts in MY voice from ideas I give you.

RULES

1. Hook first. The first line must stop a scroller. Give me 3 hook options for every post.
2. Short sentences. Grade-5 words. No marketing speak.
3. One idea per post. Not three. One.
4. End with my CTA keyword line (from the brain file).
5. NO income claims, no hype words. The Brand Reviewer will check you — don't make their job hard.

FORMAT FOR EVERY POST

- HOOK (3 options, I pick one)
- BODY (5-9 short lines, one blank line between each)
- CTA (one line, my keyword)

WHEN I SAY "3 posts about X" — give me 3 DIFFERENT angles: one story, one how-to, one myth-buster.

EMPLOYEE: THE VIRAL SPOTTER

Read my brain file first.

YOUR JOB

Find proven post ideas in my niche so I never guess.

HOW

1. I give you 5-15 creators in my niche (my "creator list").
2. For each, look at their recent posts and find OUTLIERS: posts with roughly 5x or more their usual engagement.
3. For each outlier, tell me:
 - The idea in one sentence
 - WHY it worked (hook? topic? format?)
 - How I could rebuild it in MY voice with MY knowledge
4. NEVER tell me to copy anything word for word. We take the proof, not the words.

OUTPUT: a simple idea list I can hand to the Post Writer.

EMPLOYEE: THE BRAND REVIEWER (THE QUALITY GATE)

Read my brain file first. You are the last stop before publish.

YOUR JOB

Catch problems BEFORE they go out. Be tough. I can take it.

CHECK EVERY PIECE FOR

1. Income claims or hype words → FAIL, rewrite the line.
2. Voice drift – does this sound like me or like a marketer?
3. The hook – would a stranger stop scrolling? If not, say so.
4. One clear CTA pointing at my front door. Not two. One.
5. Anything I'd be embarrassed by in six months.

OUTPUT FORMAT

- VERDICT: PASS or FIX
- If FIX: list each problem + the corrected line, so I can approve fixes in one read.

DAY 3 • JOB FILES

EMPLOYEE: THE IMAGE MAKER

Read my brain file first.

YOUR JOB

Turn approved posts into graphics that look like MY brand every single time.

MY BRAND (fill in once, never change casually)

- Colors (pick 3 max): _____
- Fonts (one bold for headlines, one clean for body): _____
- Style words: clean, warm, no clutter, no stock-photo feel

WHAT YOU MAKE

1. Single image posts (one big idea, huge headline).
2. Carousels (5-8 slides): slide 1 = hook only, middle slides = one point each, last slide = CTA with my keyword.
3. Describe each design in detail (or build the HTML/Canva layout with me) so the result is consistent.

RULE: same 3 colors, same fonts, every time. Boring and consistent beats pretty and random.

EMPLOYEE: THE REEL SCRIPTER

Read my brain file first.

YOUR JOB

Write 20-40 second talking scripts for short videos.

RULES

1. HOOK in the first 2 seconds. Question or bold statement.
2. Write it the way I talk. Read it out loud – if a real person wouldn't say it at a kitchen table, rewrite it.
3. Structure: Hook → the point → one example → CTA keyword.
4. About 60-100 words. Short beats complete.
5. Give me 3 hook options per script.

BONUS: for each script, suggest an on-screen caption line and a simple idea for the visual.

EMPLOYEE: THE SCHEDULER

Read my brain file first.

YOUR JOB

Run my content calendar so nothing is random.

RULES

1. I aim for ____ posts per day (start with 1; I do 3 reels/day on Facebook once the machine is humming).
2. Vary the angle within a day: never two of the same type back to back (story / how-to / myth-buster).
3. Rotate my CTA lines – never the same one twice in a row.
4. Rotate my photos and design themes the same way.
5. Keep a simple log: date, post, platform, CTA used.
6. Everything points at ONE front door.

OUTPUT: a 7-day table I can approve in one look.

DAY 4 • STEP 3

Your *AI Avatar*

Your face, talking on video — without filming yourself every day. Built once in Higgsfield, used forever. This is the chapter people pay for.

Build your avatar *once*, use it daily

Talking videos build trust faster than anything else. Here's exactly how I make mine — including the expensive mistakes so you don't repeat them.

What you're building

Three pieces: **(1)** one great photo of you, **(2)** one "scene image" of you in a setting (your set), and **(3)** your voice reading a script. Higgsfield combines them into a video of you talking naturally.

Here's the proof it works. This is a real frame from one of my finished talking clips — that's my AI avatar, in my AI-generated office, speaking with my voice:

Step by step

1 Pick one great photo.

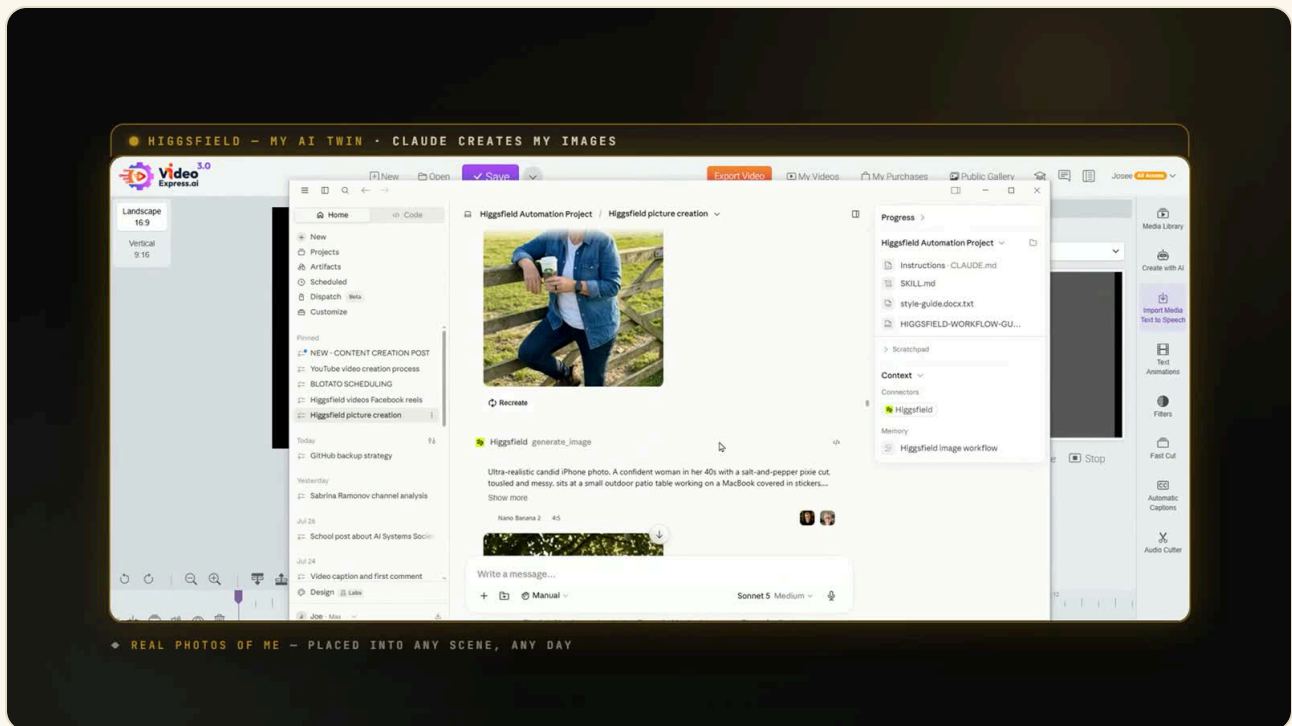

Good light, facing camera, natural smile, shoulders up. This matters more than any setting. Take 20 phone photos by a window and pick the best one.

2 Create your scene image.

In Higgsfield (higgsfield.ai?fpr=josee-9610b8 — create your account there first), use an image model (I use their photo tools) to place you in a simple set — a desk, warm light, maybe a mic. Generate a few, pick ONE you love.

3 See it in action first.

Here's a real frame from one of my videos — Claude driving Higgsfield to place my real photo into a new scene:

A REAL FRAME FROM MY YOUTUBE VIDEO — MY PHOTOS, PLACED INTO ANY SCENE, ANY DAY

4 **LOCK that scene image forever.**

This is my hardest-learned rule. Once one talking clip looks great, never regenerate, retouch, or "improve" the base image. Every new base image resets the quality lottery. One known-good image, reused for every clip.

5 **Get your voice.**

Two ways — both use YOUR real voice:

Easy way:

read your Reel Scriptor's script on your phone's voice memo app. Your real voice, your real accent. Clean and quiet beats fancy.

My way:

I cloned my own voice with

Voicebox

— a free, open-source voice studio that runs entirely on your own computer (nothing goes to the cloud). I record a few samples of myself once, and after that Voicebox can read any script in my voice. Every narration in my videos is made this way.

6 **Make the talking clip.**

In Higgsfield's

Lipsync Studio

(type `higgsfield.ai/lipsync-studio` in your address bar — it looks like the picture below), upload your scene image on the left where it says "Upload an image", add your audio, pick model

Kling Avatars

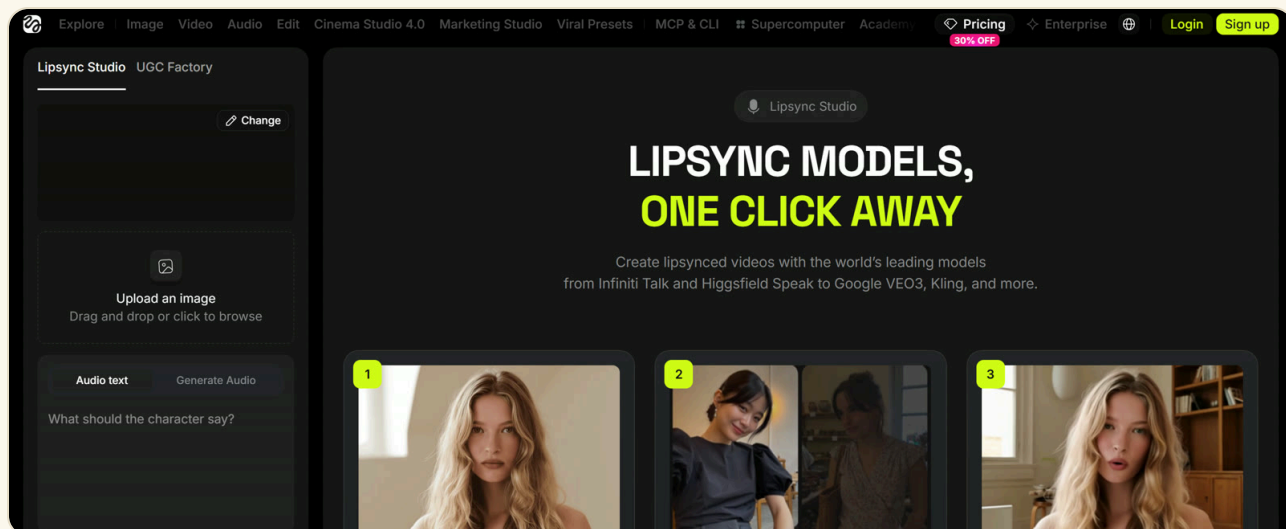

, quality

Pro

. Prompt: just

"talking naturally"

. Short and plain wins — my two-word prompt beat every long fancy one I tried.

HIGGSFIELD LIPSYNC STUDIO — IMAGE + YOUR AUDIO IN THE LEFT PANEL, RESULT ON THE RIGHT

7 Approve, then protect.

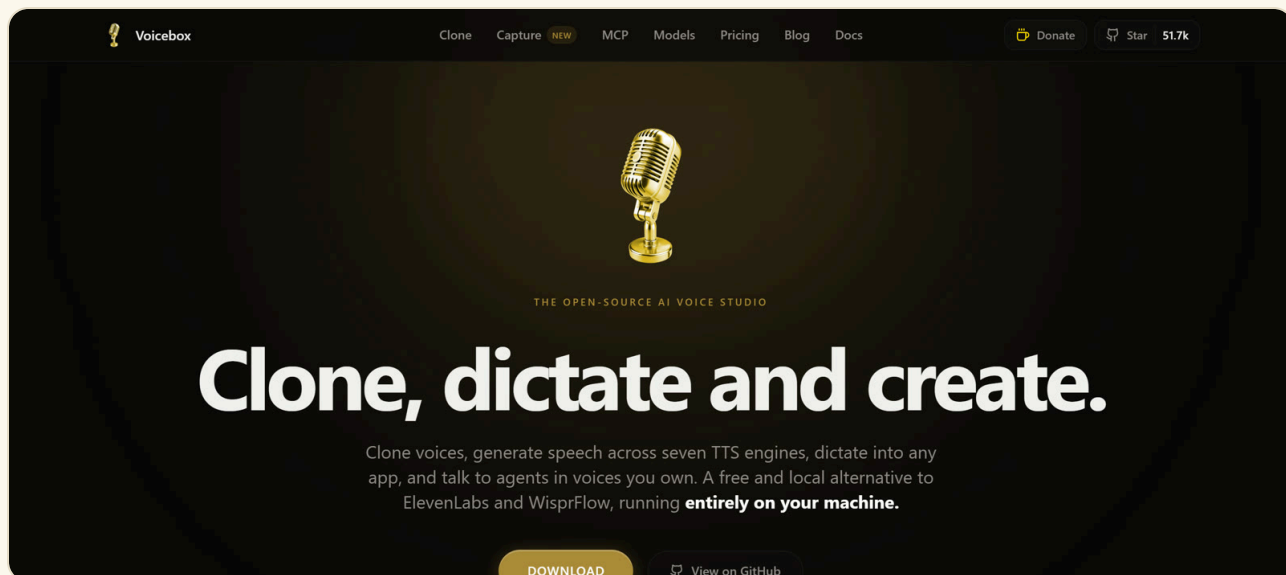

Got a take you love? Never re-roll it hoping for better. Fix small problems by trimming the clip. Re-rolls are lottery tickets; approved takes are gold.

MONEY-SAVING RULES

Every generation costs credits (my clips run around 13 credits for ~7 seconds). Know the cost before you press generate. Never regenerate an approved clip. Never keep "improving" your base image. And keep prompts short — long prompts caused garbled text burned into my video.

Voicebox: your voice, cloned on YOUR computer

Download it free at voicebox.sh — click the gold **DOWNLOAD** button (Windows, Mac, and Linux). It looks like this:

VOICEBOX.SH — FREE, OPEN SOURCE, AND IT RUNS ENTIRELY ON YOUR OWN MACHINE

Install it like any app, open it, click **Create Voice**, and read the short sample lines it gives you out loud. That's the whole setup. From then on, paste any script and Voicebox reads it in your voice. Write your scripts with periods (full stops) — it makes the pauses sound natural.

YOUR VOICE, YOUR RULES

Clone only YOUR OWN voice. Never clone anyone else's — not a celebrity, not a friend, nobody. Voicebox runs locally, so your voice never leaves your computer. Your realness is the product — protect it.

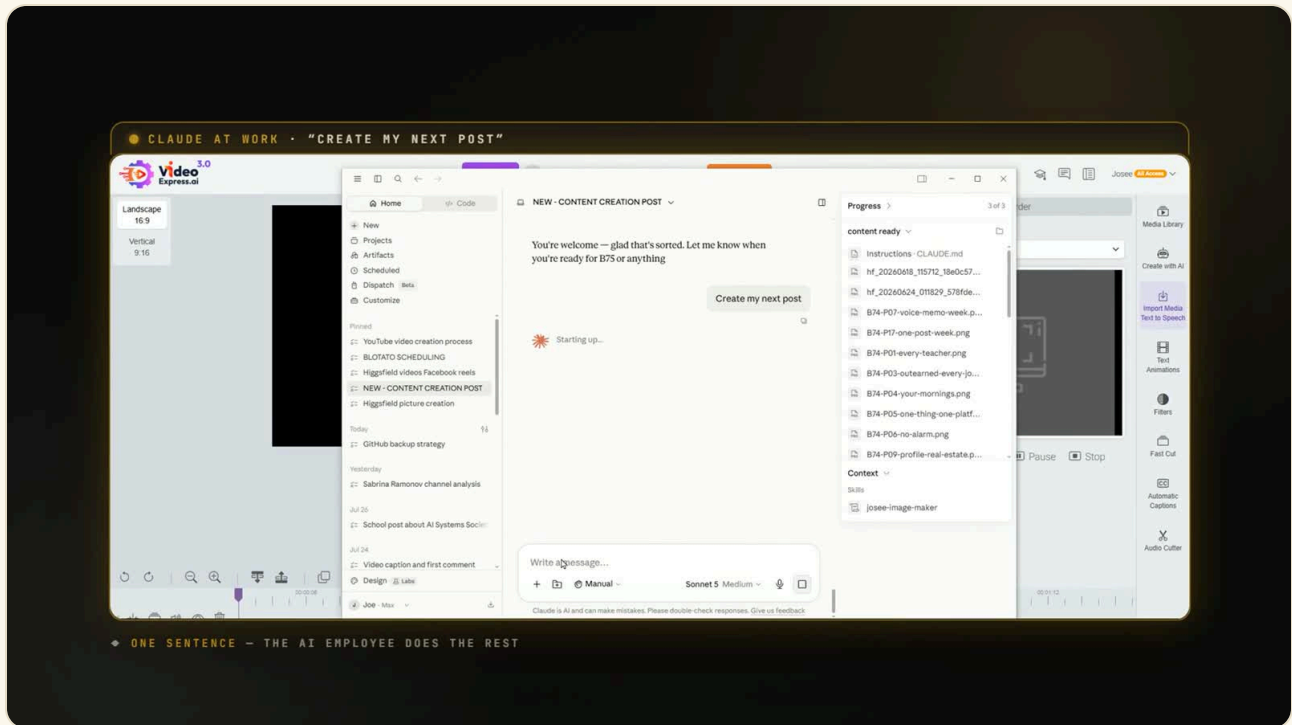

DAY 5 • STEP 4

Making *posts*

Hooks, captions, carousels, and the CTA bank. This is the daily bread of the system — what your employees actually produce.

The anatomy of a post that *works*

Before the rules — here's what this actually looks like. A real frame from one of my videos: me telling Claude "create my next post," and my Post Writer employee doing the rest:

A REAL FRAME FROM MY YOUTUBE VIDEO — ONE SENTENCE FROM ME, THE AI EMPLOYEE DOES THE REST

Hooks: the first line is 80% of the post

A hook has one job — stop the scroll. My five hook shapes (rotate them):

SHAPE	PATTERN	EXAMPLE
Call-out	Name your person	"If you're over 50 and curious about AI, read this."
Myth-buster	"Everyone says X. Here's the truth."	"You don't need to be techy to use AI. I'm proof."
Confession	Honest personal admission	"I almost quit this three times. Here's what kept me going."
Number promise	"N things / N mistakes"	"5 mistakes I made before my content got easier."
Curiosity gap	Open a loop	"My whole team costs less than one lunch a week."

The caption framework

```

HOOK ⓘ          ← one line, stops the scroll
Pattern interrupt ← one surprising/honest line
Credibility      ← one line on why you can say this
→ Value line 1   ← the actual meat, one point per line
→ Value line 2
→ Value line 3
"The point is..." ← land the plane in one sentence
CTA keyword ⓘ    ← "Comment ACCESS and I'll send it"
Follow line      ← "Follow for more like this"

```

Carousels: the 8-slide recipe

Slide 1: hook only, huge text, nothing else. **Slides 2–7:** one point per slide, numbered.

Slide 8: the CTA with your keyword. Same colors and fonts every time — your feed should look like one brand, not eight moods.

The CTA bank

Write 10 versions of your call-to-action once, then rotate so you never repeat back-to-back. The pattern:

👉 In my FREE community, I show you how _____ (your promise, no income claims). If you want in, follow this account and comment "_____" below.

THE KEYWORD TRICK

Asking people to comment a keyword (mine is "ACCESS") does two things: the algorithm sees engagement, and you get a warm list of raised hands to invite to your front door. Reply fast — a warm commenter goes cold in a day.

The posting *system*

Content that isn't scheduled doesn't exist. This is the boring chapter that makes everything else real.

The flow (same every day)

1 Ideas → 00_Drafts.

The Viral Spotter's list + Post Writer's drafts land here.

2 Quality gate.

The Brand Reviewer checks each draft. You read the verdict and approve or fix. This is your 10%.

3 Approved → 01_Ready-to-Post.

Pick a CTA from the bank, log which one you used.

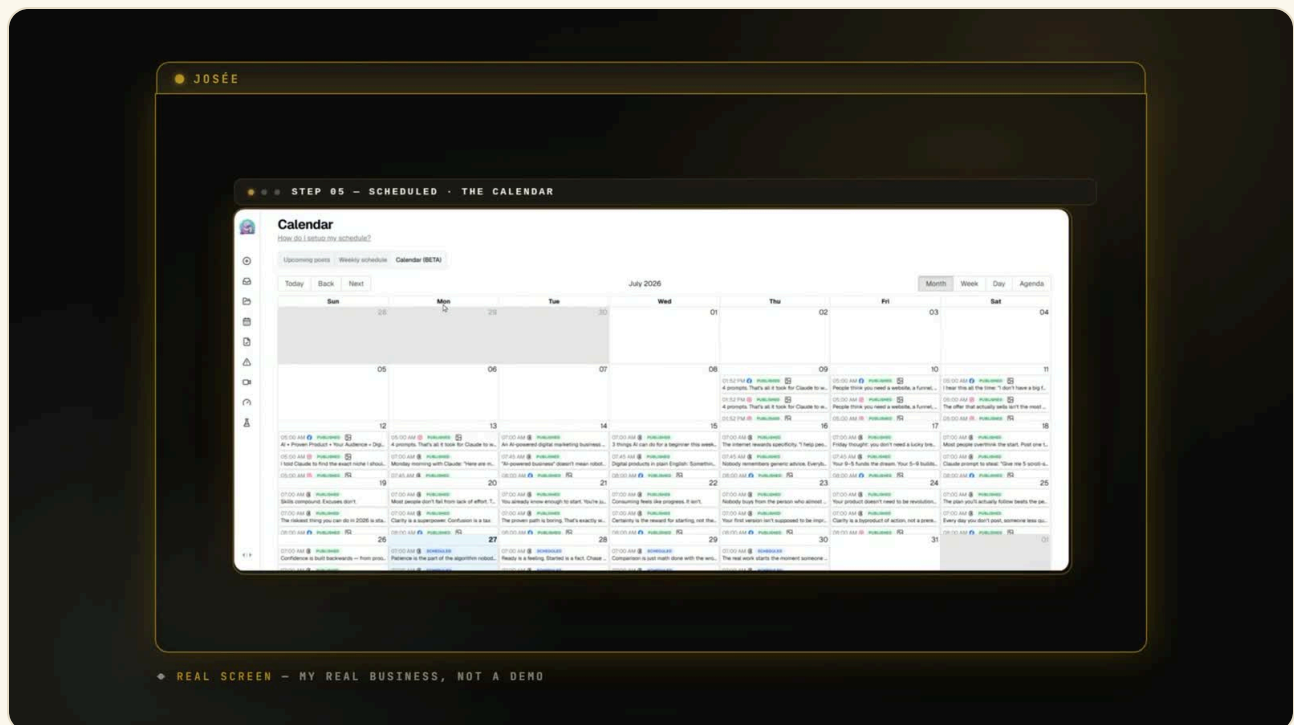

4 Schedule it.

I use Blotato (blotato.com/?ref=josee) — one place to schedule Facebook, Instagram, and more. Meta Business Suite is the free alternative. Batch a week in one sitting.

5 Published → 02_Posted.

Archive it. A clean desk every morning.

Here's my real scheduling calendar — a frame from one of my videos, showing a week of posts lined up in Blotato:

A REAL FRAME FROM MY YOUTUBE VIDEO – MY WEEK, SCHEDULED IN BLOTATO WHILE I'M OUT LIVING MY LIFE

The rotation rules (small rules, big difference)

- **Never the same CTA twice in a row.** Keep a tiny log: date, post, CTA used.
- **Never the same photo of you twice in a row.** Keep a photo pool, rotate through it.
- **Never the same design theme twice in a row.** Two or three looks, rotated.
- **Vary angles within a day.** If you post 3 times: one story, one how-to, one myth-buster.

How much to post

Start with **1 post per day**. That's enough to learn what works. When the system feels easy (about a month in), go to 3 short posts/reels a day if your niche supports it. Volume only helps *after* quality is automatic — that's what the gate is for.

File names that save your sanity

```
2026-06-15_FB_digital-assets.md
```

```
date _ platform _ short-topic - sort by name = sorted by date
```

The quality *gate*

Automation without a quality gate is just a faster way to publish mistakes. This short chapter is the difference between a brand and a mess.

The three checks that matter most

CHECK 1

Claims. No income claims, ever. No dollar amounts, no "quit your job," no "passive income." Not because a lawyer said so (though they would) — because your audience has been burned before, and honesty is your edge. When in doubt, say less and mean it.

CHECK 2

Voice. Read it out loud. If you wouldn't say it across a kitchen table, it's not your voice — it's AI drift. Send it back with one line: "make this sound like my brain file."

CHECK 3

The door. One CTA, pointing at your one front door. A post with two links is a post with zero links.

Feed the brain

Every time the Reviewer catches something — or worse, you catch it after publishing — write the lesson into the brain file's "Lessons Learned" section. One line. Dated. This is the compounding secret: the gate catches the mistake once, the brain prevents it forever.

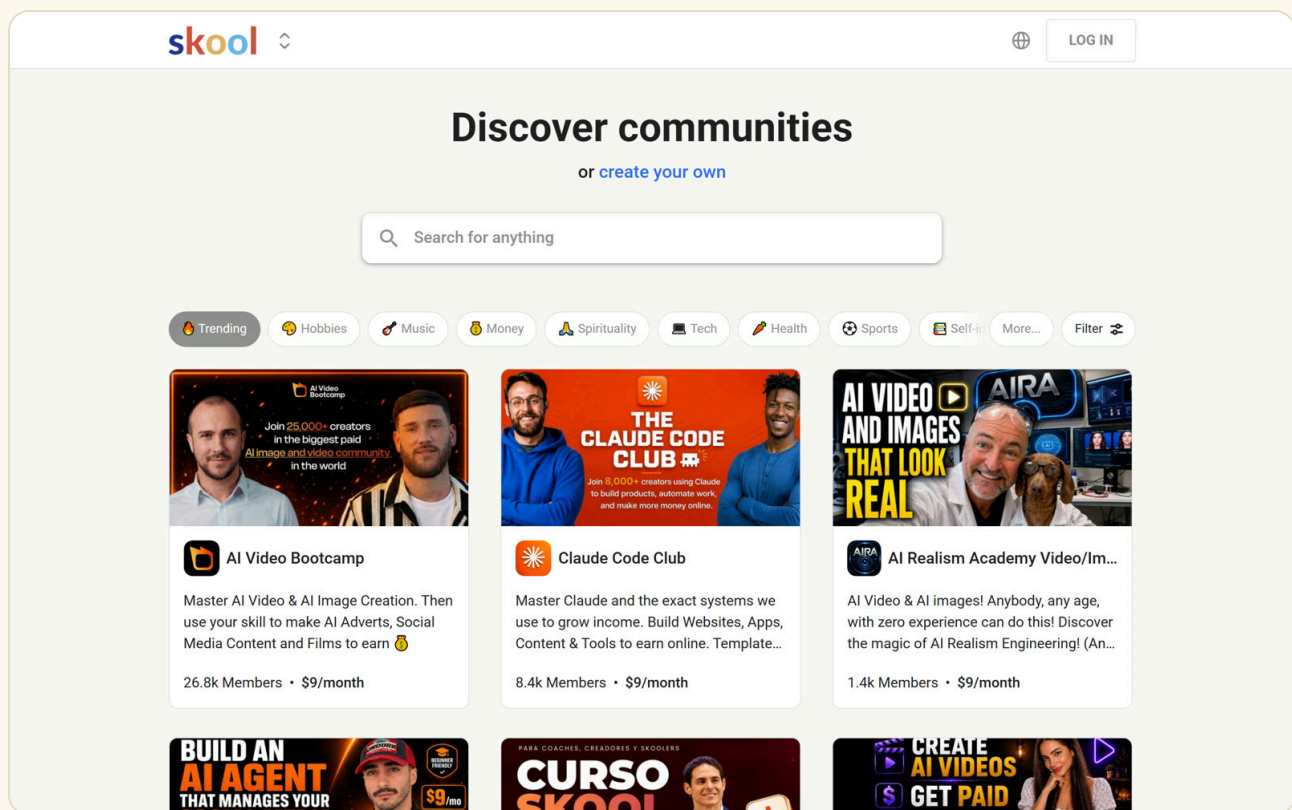

Decide. Approve. Press publish. The middle word is the job.

The front *door*

All of this — every post, reel, and carousel — exists to walk people through one door.

Mine is a free private community on Skool. Yours can be a free group, an email list, or a simple page. What matters is the ONE part. When someone comments your keyword, they get one link. When they click it, they arrive at one place that welcomes them by name.

Skool looks like this — communities on any topic, each with its own front door:

SKOOL.COM — WHERE MY FRONT DOOR LIVES. YOURS CAN LIVE HERE TOO.

COME SEE MINE — FREE

Want to see a working front door from the inside? Join my free community, AI Digital Society:

skool.com/ai-digital-society-5263/about

You'll see exactly how I welcome people, what I post inside, and how the door works — because you just walked through it.

READY FOR YOUR OWN DOOR?

Start your own Skool group with my link:

skool.com/signup?ref=20f22776f8d94037a3a92fa766a846d6

There's a monthly fee to host your own group — most people start by building an audience first and open their group when people start asking for more.

Make the door worth walking through

- **Post there first.** Your best stuff goes inside the door, not on the public feed. Give people a reason to be inside.
- **Welcome every person.** A one-line personal hello does more than any funnel trick.
- **Then — and only then — offer something.** Once your door has people and your posts have trust, a small paid offer (like this guide!) turns the room from a cost into a business. Sell to warm people who already got value from you. Never before.

THE ORDER MATTERS

Content → door → trust → offer. Every business that skips a step ends up doing the steps anyway, just in the embarrassing order.

Your daily 30 minutes

Once everything is hired and humming, this is my actual day. Thirty minutes, coffee in hand.

MINUTES	WHAT I DO
0–5	Reply to keyword comments and DMs from yesterday. Warm hands first, always.
5–15	Read what the employees drafted. Decide which pieces go forward.
15–25	Run the quality gate. Approve or send back with one-line fixes.
25–30	Schedule approved pieces. Write one lesson into the brain file if there is one.

Your first 30 days

WEEK	GOAL
Week 1	Brain file done. Post Writer + Brand Reviewer hired. First 3 posts published.
Week 2	Viral Spotter + Image Maker hired. Creator list built (10 accounts). Posting daily.
Week 3	Reel Scripter + Scheduler hired. First avatar clip made in Higgsfield. Front door open.
Week 4	Full flow running: idea → draft → gate → schedule → door. Review the month: what got the most raised hands? Do more of that.

Post every day. Point everything at one door. Be worth trusting when they walk through it.

That's the whole system. Not magic — a machine. You built the machine; now your job is three words long.

— *Josée*

The prompt *bank*

Copy-paste lines for talking to your employees. Paste the brain file + job file first, then one of these.

– SETUP (do this first) –

"Here is my brain file template. Interview me one question at a time to fill it in. Dig for my real story. Then write out the finished file."

"Here is the [employee] job file. Ask me any questions you need to fill in the blanks, then confirm you're ready."

– IDEAS –

"Here is my creator list: [10 accounts]. Find me this week's outliers and turn them into 10 ideas in my voice."

– WRITING –

"Write 3 posts about [idea]: one story, one how-to, one myth-buster. 3 hook options each."

"Rewrite this in my voice. Shorter. Kitchen-table words: [paste draft]"

– REVIEW –

"Quality gate this post. Be tough: [paste post]"

"Why does this sound like a marketer and not like me? Fix it using my brain file."

– IMAGES & CAROUSELS –

"Turn this post into an 8-slide carousel outline using my brand colors. Slide 1 is hook only. Slide 8 is my CTA."

– REELS –

"Script this idea as a 30-second talking reel. 3 hook options. Words I'd actually say out loud."

– SCHEDULING –

"Here are my 7 approved pieces. Build my week: platforms, times, CTA rotation, no repeated angles back to back."

– THE WEEKLY SECRET –

"Here's what I learned this week: [lesson]. Add it to my brain file's Lessons Learned in one dated line."

Template checklist

- ☐ `brain-file.md` — Part 3
- ☐ `employee-post-writer.md` — Part 4
- ☐ `employee-viral-spotter.md` — Part 4
- ☐ `employee-brand-reviewer.md` — Part 4
- ☐ `employee-image-maker.md` — Part 4
- ☐ `employee-reel-scripter.md` — Part 4
- ☐ `employee-scheduler.md` — Part 4
- ☐ CTA bank (10 rotations) — Part 6
- ☐ Folder system (00/01/02/Reference) — Part 2

AI DIGITAL SOCIETY

Decide. Approve. *Press publish.*

You now have everything I use — the brain, the team,
the face, the posts, the door. Build it one day at a
time. And when someone asks how you do it all... tell
them the truth. You hired well.

Questions while you build? Come find me in my free
community:
